

Associate Degree in Construction, Surveying, and Roads Engineering Technology

Mission

The program provides the skills, attitudes and knowledge necessary for the graduates to apply engineering techniques in areas such as construction, surveying, and roads. The graduates are taught the necessary abilities to perform adequately in a dynamic and participative environment. The program teaches the students the use of technical and computerized applications in the engineering technology. The technicians are prepared so that they can manage themselves with success in the areas of study, layout, and construction of roads, materials testing, land surveying, mechanical soil testing laboratory, quality control, inspection of construction projects, and Geographic Information System (GIS).
