

Associate Degree in Civil Engineering Technology

Mission

The program provides the skills, attitudes and knowledge necessary for the graduates to apply the related techniques of Civil Engineering in the area of construction. The graduates are taught the necessary abilities to perform adequately in a dynamic and participative environment. The program teaches the students the use of technical and computerized applications in the engineering technology. The technicians are prepared so that they can manage themselves with success in the areas of materials testing, land surveying, mechanical soil testing laboratory, quality control, inspection of construction projects, construction cost estimates, and as concrete and steel design assistants.
