

Associate Degree in Industrial Engineering Technology

Mission

The program provides the skills, attitudes and knowledge necessary for graduates to apply industrial engineering techniques in both areas of manufacturing and services. These are provided with graduates that have the skills necessary to participate in a dynamic and competitive environment. We serve those interested in studying industrial engineering technology with emphasis on techniques and computerized applications. The program provides students with the techniques to successfully perform in the areas of industrial safety, quality control, design methods, work measurement, layout and inventory control. The Industrial Engineering Technology program combines techniques and computerized applications in a participative way.
